

## Annex B

### **Singapore's Eligibility Criteria and Eligibility List under the Singapore-Rwanda Implementation Agreement**

#### **Eligibility Criteria**

1 The Eligibility Criteria requires ICCs to represent emissions reductions or removals that occur within the timeframe specified under Article 6 of the Paris Agreement, and meet seven principles to demonstrate environmental integrity (see [Table B-1](#) below).

**Table B-1: Eligibility Criteria for ICCs**

<b>Principle</b>	<b>Definition</b>
	To comply with Article 6 of the Paris Agreement, the certified emissions reductions or removals must have occurred between 1 January 2021 and 31 December 2030.
Not double-counted	The certified emissions reductions or removals must not be counted more than once in contravention of the Paris Agreement.
Additional	The certified emissions reductions or removals must exceed any emissions reduction or removals required by any law or regulatory requirement of the host country, and that would otherwise have occurred in a conservative, business-as-usual scenario.
Real	The certified emissions reductions or removals must have been quantified based on a realistic, defensible, and conservative estimate of the amount of emissions that would have occurred in a business-as-usual scenario, assuming the project or programme that generated the certified emission reductions or removals had not been carried out.
Quantified and verified	The certified emissions reductions or removals must have been calculated in a manner that is conservative and transparent, and must have been measured and verified by an accredited and independent third-party verification entity before the ICC was issued.
Permanent	The certified emissions reductions or removals must not be reversible, or if there is a risk that the certified emissions reductions or removals may be reversible, there must be measures in place to monitor, mitigate and compensate any material reversal of the certified emissions reductions or removals.
No net harm	The project or programme that generated the certified emissions reductions or removals must not violate any applicable laws, regulatory requirements, or international obligations of the host country.
No leakage	The project or programme that generated the certified emissions reductions or removals must not result in a material increase in emissions elsewhere, or if there is a risk of a material increase in

emissions elsewhere, there must be measures in place to monitor, mitigate and compensate any such material increase in emissions.

## Eligibility List under the Singapore-Rwanda Implementation Agreement

2 The Eligibility List of carbon crediting programmes and methodologies in Table B-2 adhere to the Eligibility Criteria and meet the requirements of both Singapore and Rwanda. The carbon crediting programmes and methodologies that are eligible may be different for each host country, as host countries also have their own criteria.

3 Additional environmental integrity safeguards may be imposed for specific project types and/or methodologies. For more information, refer to the Singapore Carbon Markets Cooperation website<sup>1</sup>.

Table B-2: Eligibility List specified under Annex A of the Singapore-Rwanda Implementation Agreement

Carbon Crediting Programmes	Methodologies
Gold Standard for the Global Goals (GS4GG)	<ol style="list-style-type: none"> <li>1. Two and Three Wheeled Personal Transportation V1.0</li> <li>2. Emission Reduction by Shore-Side or Off-Shore Electricity Supply System V1.0</li> <li>3. Emission Reductions from Safe Drinking Water Supply V1.0</li> <li>4. Reduced Emissions from Cooking and Heating – Technologies and Practices to Displace Decentralized Thermal Energy Consumption V4.0 (TPDDTEC)</li> <li>5. The Gold Standard Simplified Methodology for Clean and Efficient Cookstoves V3.0</li> <li>6. Quantification of Climate Related Emission Reductions of Black Carbon and Co-Emitted Species Due to The Replacement of Less Efficient Cookstoves with Improved Efficiency Cookstoves V1.1</li> <li>7. Methodology for Metered &amp; Measured Energy Cooking Devices V1.2</li> <li>8. Indicative Program, Baseline and Monitoring Methodology for The Large-Scale Supply &amp; Distribution of Efficient Light Bulbs, Shower Heads and Other Water Saving Devices to Households V2.0</li> <li>9. Suppressed Demand Methodology Micro-Scale Electrification and Energization V1.0</li> </ol>
